***Extended Abstract***. *The impetus of Appdown-19 in the uprise of Covid-19 pandemic is about internet-based applications that will create a digital presence in an isolated-free era. Covid-19 partial lockdown is now a total Appdown. A computer society can put a number of measures in catering for the healing signal and information of the normal society.*

**Keywords**. appdown; physical-free; contact; mirror-meet; internet;protocol; continuum.

## 1- Introduction

The understanding of transport of the current pandemic illness or disease is physical contact not distant at about 2 metres apart. The physical point of transmission with a COVID[3] patient is possible when a face mask[5] is not placed or weared on. The daily activity of a healthy non-Covid is anticipated to be placed in a non-quarantine centre

and monitored at self-pace. The lockdown is a problem in a quarantine period when we are all aware of the point of transmission in a COVID environment[6].

The transmission of COVID-19 is a cross transport in a non-clean environment of a COVID present virus[4].

## *A physical contact is a presence between 3 or more people.*

A healthy physical point can be achieved when two or more people are face masked with a non-transmissible, a more nose-mouth mask. A COVID transmit point is possible when a nose-mouth mask.

A COVID transmit point is possible when a nose-mouth mask is desirable in a COVID-prone environ-ment. In other sense, a physical person has no face mask on and having a physical contact with others. The idea of physical contact is scientifically known in the context of physical contact in energy generation[7] or physical attraction. In the sense of energy generation, that is the generation of electrical energy. In harvesting the source of energy is the storage of electrical energy in battery. An unattended and constant

source of electrical energy in storage in battery is necessary in providing a block mirror[1] meet. [*Block mirror-meet, Ref. 15*].

In total survelliance of non-COVID patients is also important as the quarantine fellas. A situation of non-monitored and healthy people is a case of survelliance in the pandemic era.

---

A computer society[8] can put a number of measures in catering for the healing signal and information of the normal society.

An isolated and self-quarantine community is freed from the physical environment of COVID-19 present virus.

## 2- Internet Protocol Transport :Appid-19

A block mirror-meet interface is a human computer interface provided by a  computing machine. A physical contact-free is approachable when HCI support is given in a quarantine centre in monitoring a centre in healing process.

Computer-supported workspace is another approach to be separated by a mirror-meet presence. The mirror-meet is a novel term in describing a computer monitor or screen blocked from a COVID quarantine centre. A physical[2]-free contact is possible to be digitally present to a contact person without possibly touching each other. The mirror-meet checkpoint of mounted workplaces are also possible with the current cloud[12] technology[13] provision. Work needs to go on whether COVID-present virus or not. There are many checkpoints in place in and aound the country, Ghana. People are not able to get to their destinations. Messaging platforms are now important than ever in providing a physical-free mirror-meet interface. If COVID-present virus cannot enable a physical contact but a physical point is enabled with Facebook[9] platform, Skype[11], Gmail Messenger[10] and more. These technologies hinder a cross-transport from nose-mouth pair. A healthy physical contact points are eliminated from the physical environment to the physical continuum[14] of beings with human presence of internet provision no matter the limit of space and time. There is a precautionary measure already in place by computer professionals and experts to intersect with the

physical contact hinderance or prohibition.

The following is a list of an isolated-free digital presence:

| **Internet Applications- Appid-19** | |
|---|---|
| 1. Facebook Messenger | 11. Google Drive |
| 2. Gmail Messenger | 12. Google Assistant |
| 3. Skype Messenger | 13. Google Slides |
| 4. Whatsapp | 14. Google Sheets |
| 5. Instagram | 15. Google Play |
| 6. Google Arts &Culture | 16. Amazon Cloud |
| 7. Google Docs | 17. Vodafone Conference Call |
| 8. Google Duo | 18. Novel Reader App |
| 9. Youtube | 19. Bill Payment App |
| 10. Gmail | and More Applications. |

*Appid-19 Summary.*

(1) It is used to chat and message friends, family and others.
(2) Same as (1).
(3) Chat and video conference calls is supported.
(4) Same as (1).
(5) Picture showcase to get visual presence.
(6) Exhibiting art or culturing a way of life.
(7) Editing word and saving to print document formats(pdf).
(8) Same as (3).
(9) Providing video entertainment in isolated places.
(10) Sending and receiving daily messages from clients and office.
(11) A storage of important files from business, personal and more.
(12) A help assistant in searching for cook recipes from places and more.
(13) Presenting a business or class notes to a group of

people.
(14) Working on excel points from home.
(15) Listening to music at home on the Internet.
(16) Using an application provision in a cloud infrastructure because of high cost of production.
(17) A provider of conference calls with their network provision.
(18) Reading novel stories at home as a means of relaxation and
(19) Paying bills from home with apps like Ghana Water Mobile Payment, Electricity Corporation of Ghana Bill Payment.

# 3- Conclusion

Much concerns in this pandemic era are been tackled with internet computing applications from major corpora-tions list as both application provider and company at service. In approaching this isolated society created by COVID-19, the author has provided a comprehensivee list of internet-based applications. A total Appdown is an approach in providing a physical-free mirror-met[15].

*Mirror, Mirror, Mirror*
*Mirror-block, Mirror-Met*
*Partial Lockdown, Total Appdown*
*Covid-19, Appid-19*
*Isolated Commune, Physical Community*
*Physical Lockdown, Digital Presence*
*Cross Transport, Internet Protocol Transport.*

## About Author.

Dr. Frank Appiah hold studentships at the Bsc. (Bachelor in computer engineering*, Kwame Nkrumah University of Science and Technology*) in 2008, Msc.(software engineering*, King's College London*) in 2009/10 and 2 doctorates of philosophy (DPhil / PhD) in computer engineering from *Kwame Nkrumah University of Science and Technology in 2013.* He did his doctor of philosophy in computer science and engineering in 2011/2012 at King's College London and his postgraduate studies. Dr. Frank Appiah is a research fellow at Kwame Nkrumah University of Science and Technology and assistant professor at King's College London, University of London.
